

# Saflec Panache'

## Multi-zone Walk-through Metal Detector

The Panache was designed as a quality security detector with a pleasing aesthetic appearance and all of the features plus some not found in the up market units available.

The unit incorporates detector coils and infra-red photocells in each side making up 12 individual detection zones. When a pre-settable amount of metal passing through the unit is exceeded, an indication is given by means of indication lights in each side as to the position of the metal detected. In addition an audio alarm is given the frequency of which increases in proportion to the vertical positioning of the metal. The security personnel are therefore made aware of the position of the metal being carried without having, necessarily, to look at visual signals. In addition, voltage free contacts are provided to actuate a remote alarm or lock a turnstile. The unit has a touch screen for control functions and diagnostics.

The detector frame is constructed from fiberglass which ensures that the unit is robust and durable, and will not deteriorate with time. It is light and can easily be maneuvered by one person. The shape has been designed to be aesthetically pleasing and modern.

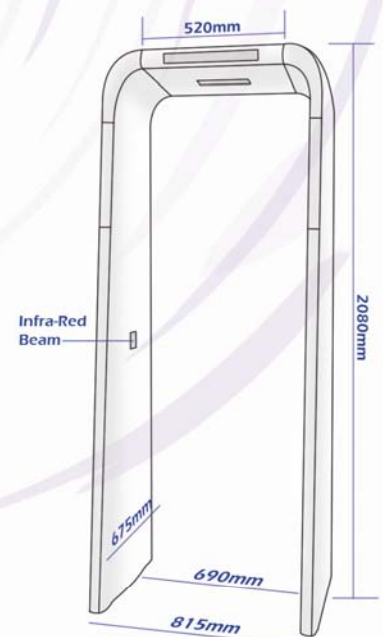

Mounting brackets can be provided, on request. Five metres of mains cable is supplied as standard, entering the unit from floor level. The detector is normally stocked in a light grey, but alternative colours can be specified.

### Applications

- Airports
- Public buildings
- Law courts
- Prisons
- Discos
- Industrial premises
- Banks

### Features

- Detects ferrous and non-ferrous metals
- Free Standing
- Durable fiberglass construction
- Available in various colours
- Self test
- Infra-red photocells with traffic count to monitor movement through the detector
- Interlocking relays
- Audio alarm with increasing pitch to indicate in which of 4 vertical zones the metal is carried, thus easing area identification
- 3-part design for ease of assembly and transportation (done using reliable contacts, no connectors, and 4 hand operated fixing screws)
- Touch screen operation for individual sensitivity setting per zone These settings are maintained even if power is removed
- Password protected
- Network function where multiple units can be remotely monitored and controlled as well as total counts of traffic and failures downloaded. (particularly valuable for marketing purposes)
- Optional access control to monitor staff / visitor movement
